Instructions to Students for Community Service Project

Please read the detailed Guidelines on Community Service Project hosted on the website of AP State Council of Higher Education <https://apsche.ap.gov.in>

Link:

<https://apsche.ap.gov.in/Pdf/Guidelines%20for%20the%20OJT%20Internship%20Community%20Service%20Project.pdf>

1. It is mandatory for all the students to complete 2 months (180 hours) of Community Service Project as a part of the 10 month mandatory internship/on the job training.
2. Consider yourself as a committed volunteer in the community, you work with.
3. Every student should identify the village/community/habitation for Community Service Project (CSP) in consultation with the College Principal/the authorized person nominated by the Principal.
4. Report to the community/habitation as per the schedule given by the College. You must make your own arrangements of transportation to reach the community/habitation.
5. You will be assigned with a Faculty Guide from your College. He/She will be creating a WhatsApp group with your fellow volunteers. Post your daily activity done and/or any difficulty you encounter during the programme.
6. You should maintain punctuality in attending the CSP. Daily attendance is compulsory.
7. You are expected to learn about the community/habitation and their problems.
8. Know the leaders and the officials of the community/habitation.
9. While in project, always wear your College Identity Card.
10. If your college has a prescribed dress as uniform, wear the uniform daily.
11. Identify at least five learning objectives in consultation with your Faculty Guide. These learning objectives can address:
 - Information about the community, including the realities and problems of the society.
 - Need for creating awareness on socially relevant aspects/programs.
 - Acquiring specific Life Skills
12. Practice professional communication skills with team members, and with the leaders and officials of the community. This includes expressing thoughts and ideas effectively through oral, written, and non-verbal communication, and utilizing listening skills.
13. **Be regular in filling up your Program Book. It shall be filled up in your own handwriting. Add additional sheets wherever necessary.**

14. At the end of Community Service Project, you shall be evaluated by the person in-charge of the community/habitation to whom you report to.
15. There shall also be evaluation at the end of the community service by the Faculty Guide and the Principal.
16. Do not indulge in any political activities.
17. Ensure that you do not cause any disturbance to the inhabitants or households during your interaction or collection of data.
18. Be cordial but not too intimate with the persons you come across during your service activities.
19. You should understand that during this activity, you are the ambassador of your College, and your behaviour during the community service programme is of utmost importance.
20. If you are involved in any discipline related issues, you will be withdrawn from the programme immediately and disciplinary action shall be initiated.
21. Do not forget to keep up your family pride and prestige of your College.
22. Remember that you are rendering valuable service to the society and your role in the community development will become part of the history of the community

Community Service Project Report

submitted in accordance with the requirements for the degree of bachelor of technology

Name of the College : Bonam Venkata Chalamayya Engineering College (A)-22,Odalarevu.

Department : Computer Science and Engineering.

Name of the Faculty Guide : Mrs. B. Ganga Bhavani, Assistant prof.

Duration of the CSP : **From**.....**To**.....

Name of the Student : Prajwal Lekhi

Registration Number : 22221A05D2

Programee of Study : Community Service Project

Year of Study : 2025-2026

Date of Submission :

Student's Declaration

I, **Prajwal Lekhi**, a student of **Community Service project** Program, Reg. No.:**22221A05D2** of the Department of **Computer Science and Engineering** in **Bonam Venkata Chalamayya Engineering College (A)-22 Odalarevu**. Do hereby declare that I have completed the mandatory community service from.....To..... ..
In..... (Name of the Community/Habitation) under the Faculty Guideship of, **Mrs. B. Ganga bhavani**, (Name of the Faculty Guide), Department of **Computer Science and Engineering & IT** in **Bonam Venkata Chalamayya Engineering College (A)-22 Odalarevu**

CERTIFICATE FROM OFFICIAL OF THE COMMUNITY

This is to certify that

Reg.No.....of student from III B.Tech II Sem Computer Science and Engineering Department in BVC Engineering college (A)-22,Odalarevu. Underwent community service in.....FromTo.....

The overall performance of the Community Service Volunteer during his/her community service is found to be (Satisfactory/Good).

Authorized Signatory with Date and Seal

ACKNOWLEDGEMENTS

I would like to express my deepest gratitude to BONAM VENKATA CHALAMAYYA ENGINEERING COLLEGE, ODALAREVU for their invaluable guidance and support offering this community service program, which has been instrumental in bridging the gap between academic study and professional practice.

We convey my special to **Mrs. B. Ganga Bhavani**, M.Tech, (Ph.D), who has been our project guide we sincerely thanks her from the support and guidance which was given to us without the support we wouldn't have made this effect of our success.

We convey our special thanks to CSP Coordinator **Mr. M.V.K Subash**, M.Tech, (Ph.D) for his constant encouragement, valuable suggestions, and continuous support throughout the community service project. His guidance and motivation helped us successfully complete this work and gain practical knowledge and experience.

We convey my special thanks to our Head of department **Dr. Meera Sharif Sheik**, M.Tech, Ph.D Professor in COMPUTER SCIENCE AND ENGINEERING department and Teaching & Non Teaching faculty members in the department for providing all facilities for carrying out this work.

We would also like to thanks to our Principal of BVC engineering College (A)- Odalarevu. **Dr. D. Maheswar** Ph.D , M.Tech , MSAE , MCI , MISTE for providing Excellent facilities and motivation to carry out this work

ABSTRACT

Agriculture is an important sector in India. It is indispensable for the sustenance and growth of the Indian economy. On an average, about 70% of the households and 10% of the urban population is dependent on agriculture as their source of livelihood. Today, India is a major supplier of several agricultural commodities like tea, coffee, rice, spices, oil meals, fresh fruits, fresh vegetables, meat and its preparations and marine products to the international market. India is a large producer of several agricultural products. Most of the Indians population is in agriculture. In terms of quantity of production, India is the top producer in the world in milk, and second largest in wheat and rice. Agricultural production is prone to several risks which affect both producers and consumers.

Now-a-days agriculture plays a vital role in every one's life. But, for the producers it is very hard to live in this farming field. Because, the farmers are not getting much income in this farming field and with the income generated they can't lead their lives. The prices of items that are required to do farming is increased and government rules are making the farmer as poor. The capital is more and the generated revenue for the farmer is less when compared to all the sectors. By, all the factors that are affecting the farmers lives the agriculture field becoming scare for farmers. The farmers are migrating to another sector to get more income and as a result of it no one is showing interest on agriculture. Even the farmers are not willing to make their children to study agriculture. Without knowing the sacrifices of farmers many people are wasting the food. To make the agriculture sector evolved for the future generations the people has to know the importance of agriculture.

In order to enhance investment and achieve a sustained increase in production, coherent and integrated long-term strategies and policies are required to reduce risk aversion and build flexibility among Indian rural producers. There is a need to provide remunerative prices for farmers in order to increase the incomes of farmers.

CHAPTER 1: EXECUTIVE SUMMARY

1.1 Description of Community:

Komaragiripatnam is a village located in Gollaprolu Mandal in Allavaram Mandal at Konaseema district, Andhra Pradesh with total 1250+ families residing. Approximately 1250+ families live in this village. The village is about 2500 acres. Paddy and Vegetables are the main cultivating crops in that village.

1.2 Summary of activities done:

- Finding the village that is suitable for my project.
- Conducted the survey by preparing a form that is useful for gathering information from the farmers about their fields.
- From that information I found the major problems faced by the farmers while cultivating the crops.
- Conducted the Awareness campaign in the village based on their problems and give the possible solution by interacting with them.

1.3 Learning Objectives:

- To sensitize the students to the living conditions of the people who are around them,
- To make students aware of their inner strength and help them to find new /out of box solutions to the social problems.
- Provides opportunity to become active member of the community
- Enables to acquire life skills and knowledge, as well as provide a service to those who need it most.

1.4 Project Outcomes:

- Improved social responsibility and citizenship skills.
- Improves students ability to apply what they have learned in “the real world”.
- Greater interpersonal development, particularly the ability to work well with others, and build leadership and communication skills.

CHAPTER 2: OVERVIEW OF THE COMMUNITY

2.1 Historical profile of the community/habitation:

Komaragiripatnam is a large village located in Allavaram Mandal at Konaseema district, Andhra Pradesh with total 1250+ families residing. The Komaragiripatnam village has population of 8239 of which 4349 are males while 3890 are females as per Population Census 2011.

In Komaragiripatnam village population of children with age 0-6 is 941 which makes up 11.4% of total population of village. Average Sex Ratio of Komaragiripatnam village is 859 which is lower than Andhra Pradesh state average of 993. Child Sex Ratio for the Komaragiripatnam as per census is 1000, higher than Andhra Pradesh average 939.

Komaragiripatnam village has lower literacy rate compared to Andhra Pradesh. In 2011, literacy rate of Komaragiripatnam village was 62.07 % compared to 67.02 % of Andhra Pradesh. In Komaragiripatnam Male literacy stands at 66.58% while female literacy rate was 58.46 %.

As per constitution of India and Panchayati Raaj Act, Komaragiripatnam village is administrated by Sarpanch (Head of Village) who is elected as representative of village.

The statistics as per the year 2011

Particulars	Total	Male	Female
Population	8239	4349	3890
Child (0-6)	941	560	381
Literacy	62.07%	66.58%	58.46%
Total workers	804	683	121
Farmers	2526	2143	383

2.2 Community Diversity:

Komaragiripatnam had agriculture as the basic occupation. In reality, Komaragiripatnam village life is a mixture of tranquility and innocence and that is far simple and easy to live. This village is connected through a variety of essential linkages with other villages and with urban areas both near and far. Komaragiripatnam is characterized by multiplicity of economic, caste, similarity, occupational and even religious groups link vertically within each settlement. Factionalism is a typical feature of this village politics. The poor and the wealthy live side by side in this village.

Probably the most glaring and also depressing features of these village is the poverty and illiteracy of the village people. They are generally poor with a very low income. They take coarse food and put on rough clothes. The pressure on land is high resulting in fragmentation of holdings and poor productivity.

2.3 Brief notes on Socio-Economic conditions of the Community:

Besides poverty the village people are steeped in ignorance and illiteracy. The opportunities for education are meagre in the villages. The village school is generally in a dilapidated condition. Facilities for higher education are practically nil. Due to poverty the villagers cannot send their sons to city for education. Due to illiteracy, they cannot improve upon their agriculture or supplement their income by other means. Poverty is thus the cause and effect of illiteracy and the backwardness of the villagers. But, The lives of the people in that community are purely dependent on mother nature which is farming. Since they are affecting with loses sometimes but they strongly stood with farming which is truly inspiring.

CHAPTER 3: COMMUNITY SERVICE PART

3.1 Conducting the survey: By conducting the survey I gathered the information from the farmers related to my project which it includes the problems that are being facing by the farmers, and how the farming activities on their lives.

3.2 Analyzing the problems and finding out the solutions: After conducting the survey, I had identified all the major problems that are facing by the farmers and I have found some solutions for the problems.

3.3 Conducting campaign: With all the possible solutions I had conducted a campaign by going to the fields and interacting with the farmers and telling them the solution which I had discovered for their problems and explained the benefits in using the solutions.

3.4 Interacting with the Sarpanch: I had interacted with the village Sarpanch and discussed all the problems that were noticed by me during the survey phase and requested to solve the problems that are facing the farmers.

In this community service part, it has Positive impact on student's academic learning such as demonstrated complexity of understanding, problem analysis, problem-solving, critical thinking and it is also improves the student's ability to apply what they have learned in "the real world".

It also improves the social responsibility and citizenship skills, Greater involvement in community service after graduation career development and connections with professionals and community members for learning and career opportunities. It has Greater interpersonal development, particularly the ability to work well with others, and build leadership and communication skills.

CHAPTER 4: ACTIVITY LOGS

4.1 ACTIVITY LOG FOR THE FIRST WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	I met the village Sarpanch to explain about the project and he accepted to do it. I collected the information of farmers land, cultivating crop, acres from Gram Sachivalayam Staff.	Took permission about the project with village sarpanch.	
Day – 2	Gathered details about the village through web and sachivalayam staff.	Collected details about the village. Acres of land in the village – (2500 acres) Number of houses– (1250+)	
Day – 3	This day I interacted with 5 farmers and gathered lot of information from them like how they cultivate the field, how much they invest in farming and profits in farming.	Farmers are facing problems like electricity problems, Not getting minimum price for the products, Natural disasters, pesticide attack.	
Day – 4	This day I interacted with 6 farmers nearby rice mill and collected more information regarding agriculture and why they are engaged in farming without getting much profits in that.	I came to know that problems are late payment for their products sold to the government. Due to heavy rains the cultivated land is damaged.	
Day – 5	Interacted with three farmers near by church and collected the following data. After sometime due to heavy rains I interacted with the farmers and collected info like crop type , days to yield, revenue generated.	The major problems are Water problems for the field. Pesticide attacks due to lack of attention.	
Day – 6	On this day I interacted with the three farmers and identified their problems. Every person major problem is lack of income which can't afford to buy their products to cultivate.	The problems are not getting minimum price to buy the products and facing water problem.	

WEEKLY REPORT

WEEK – 1 (From to)

Objective of the Activity Done: To collect the information from the farmers regarding the farming.
Detailed Report:
On the first day I had interacted with the village Sarpanch to take the permission regarding
conduction of project and taken the data from the sachivalayam staff about acres of land and
how many number of houses in the village and what crops the farmers are cultivating in their
lands. In this week I had interacted with nearly 30 farmers where I collected information about
their farming activities and what type of crop they are cultivating and what problems they are
facing in their farming activities and how much income they were generating in their
occupation. In this whole week I noticed that problems that are being faced by the
farmers like electricity problems, and farmers are not getting minimum prices for their
Production.

4.2 ACTIVITY LOG FOR THE SECOND WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	Interacted with few farmers nearby Church where the fields are located. Beside the water canal. These farmers mainly cultivate paddy and some vegetables varieties.	The main problems that were noticed are not getting minimum price for their products and financial issues.	
Day – 2	I interacted with 7 farmers and collected lot of information about paddy cultivation in which the earning is more for the farmers in winter season but they are also facing lot of problems in cultivation.	The major problems that are identified is Pest attack on crops due to lack of attention and financial issues	
Day – 3	Interacted with 8 farmers nearby beer factory where they cultivate paddy bitter guard etc. Here, we came to know that there are many land related issues in that region.	The problems we came to know that irrigation problem, electricity problem and financial issues.	
Day – 4	Interacted with some more farmers by going to the fields to collect the information about the type of crops they were cultivating and how much income they were generating in the farming.	Here also we noticed many problems in the farming such as water problem, electricity problem, financial issues, natural disasters and pest attacks.	
Day – 5	Interacted with 4 farmers who have the land of 2 acres each. Each person cultivates 2 crops only for the better cultivation. The earnings of them are equally distributed.	The major issue we noticed is late payment for their products sold to the government.	
Day – 6	Interacted with only single farmer due to heavy rains and that farmer is having 6 acres of land who cultivates different types of vegetables and earns properly.	The farmer which we have interacted today is affected by losing all his crops due to heavy rains.	

WEEKLY REPORT

WEEK – 2 (From Dt to Dt)

Objective of the Activity Done: To know more about the farming and what are the problems that are facing by the farmers in cultivation.

Detailed Report:

In this week I collected a detailed information about the farming activities and how much

capital they were investing in the farming and what kind of problems they were facing in

cultivation.in this week we had interacted with less farmers but we noticed many issues that

are involved in farming. Let me discuss in detail with the collected information. Interacted

with 8 farmers nearby beer factory. Where they cultivates paddy ,bitter guard etc. These

paddy bags are sold to the government. In “1” acre of land nearly they produce 28-30 bags of

Paddy(75 kgs per bag). the government is buying their bags based on the condition of rice

which includes dryness, wetness and colour. Let me explain in detail by taking another

farmer details who cultivates brinjal ,bottle guard in his land of 2 acre's.
Where he invest a

capital of 30,000/- to 35000/- .Originally any vegetable takes 40-45 days to grow and yield

under certain climatic conditions. But whenever a farmer needs to sell them to the market on

an average he gets only Rs 200/- for 10 kgs. But a common people by the vegetables at Rs

50/- to 60/- per kg from the market. This is how the market people are getting benefited but

the farmers are still suffering.

--

--	--

4.3 ACTIVITY LOG FOR THE THIRD WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	I have approached our csp project incharge sir by asking the information about how to conduct the campaign in the village.	As the procedure is different from one region to another region.Sir,had given some advices and information regarding the campaign.	
Day – 2	I have approached the sachivalayam staff and agriculture assistant of Tatiparthi regarding the procedure for conducting the campaigning.	Since, Our project is based on the agriculture the procedure to conduct the campaign is to interact with the farmers in the fields itself.	
Day – 3	All my teammates had gathered together and identified the common problems which we have noticed in the survey phase.	Identified the problems such as not getting affordable price and the farmers are facing issues like pest attacks, irrigation problems and less production.	
Day – 4	As, I have noticed some of the problems that are facing by the farmers I have referred internet and many sources to find the solutions for the problems.	Referred the internet and interacted with some of my relatives we don't find any solutions from their side but we have noticed the domain areas where I can solve the problems.	
Day – 5	Myself and my teammates gathered and discussed the problems and identified some of the solutions for the problems facing by the farmers.	As the paddy field requires more water for irrigation the farmers are releasing more water into the fields than required. The Stagnation of the water in the fields effect the fields from direct sun rays.	
Day – 6	We interacted with daily labours who works in the field daily.	We came to know that the labours are getting low paid for the amount of the work they did.	

WEEKLY REPORT

WEEK – 3 (From Dt to Dt)

Objective of the Activity Done: Finding the solutions for the problems identified in the survey phase
Detailed Report:
I have approached my faculty guide and Tatiparthi sachivalayam staff and agriculture
assistant of that village for the procedure to conduct the campaign.As,the procedure is
different from region to region the agriculture assistant of the Tatiparthi have given the
the fields itself. After, my teammates had gathered together and identified the major issues that
are facing by the farmers and come up with some of the solutions like as the farmers are
releasing the large amount of water into the paddy fields than required it causes the
stagnation of water and direct sun rays to the stagnated water will heat the water and causes
the plant to destroy. And, the pest attacks is different from season to season the farmers don't
have that much of knowledge to control the pest attacks in the fields for that problem we
have noticed one application called "plantix" which is a crop doctor application where the
farmer can find the solutions for various pest attacks.

4.4 ACTIVITY LOG FOR THE FOURTH WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	As the paddy bags are sold to the government the farmers are getting not even getting minimum price for their product. As the price varies based on the paddy grains we have communicated with the sarpanch to look into the issue and if possible the government will provide affordable price for the products.	Interacted with village sarpanch and explained the problems that are facing by the farmers. We have submitted the letter to the sachivalayam to request to government to provide affordable price for the farmers.	
Day – 2	Interacted with some more farmers by going to the fields and explaining our solutions to them and saying the advantages of using those solutions in their practical work.	As the outcome of the activity the farmers felt happy with my solutions and they have said that they will use the solutions from in their farming practices	
Day – 3	I went to some nearby shops in the village and asked about the fertilizers that mostly used in the fields and collected details of them.	Urea price : last year :200/- This year:250/- DAP price Last year:-800/- This year:-1500/-	
Day – 4	Interacted with some of the farmers about the fertilizers like what types of fertilizers need to use and to check whether they are in exact ratios or not.	Collected details about the fertilizers that used in the farming	
Day – 5	On this day we interacted with some of the farmers about the plantix app, And explained them how to use the app in various situations.	Explained about how to use Plantix app to the farmers.	
Day – 6	This day I keep on spending time on by telling about the solution to the farmers.	Explained various solutions about their problems faced.	

WEEKLY REPORT

WEEK – 5 (From Dt to Dt)

Objective of the Activity Done: To conduct the campaign by giving our solutions.
Detailed Report:
To conduct the campaign in the Komaragiripatnam area we have gathered some of the farmers nearby
Sachivalayam and interacted with them. We have clearly explained our solutions to the
farmers and explained the benefits by using the solutions in their farming activities. The
solutions are using seaweed extracts in the paddy fields in the first 15 days of their cropping
can yields the more amount of paddy grains. Other solution is to not stagnate the water in
the paddy fields as we are stagnating the water in the fields which the direct sun rays will
heat the water and destroys the growth of plants. As many farmers don't have all the pest
attacks in detail and controlling of them we have come with one solution by showing the
application called "Plantix" where the farmers can find the solution for all the pest attacks
village Sarpanch and explained the problems that are being facing by the farmers by not
getting affordable price for their paddy bags. As the government is fixing the prices they are
not getting the amount which, they have invested in the farming. So, We have communicated
with the Sarpanch to forward the issue to the government and provide the affordable price
for paddy bags.

CHAPTER 5: OUTCOMES DESCRIPTION

Details of the Socio-Economic Survey of the Village/Habitation Attach the questionnaire prepared for the survey.

The topic for the Socio-Economic Survey that I have chosen is Agriculture and its impact on Farmers. For going forward to do the Survey, I went to the Village officials and taken their permission for the interaction with the farmers in the village. Later on, I went to the fields for the direct interaction with the farmers for knowing their problems and the changes that they were required to be change. For knowing their problem's, I was interacted with each and every farmer in the village, so that I can identify the most common problems that were faced by all the farmers in the village. Among those details I can list out the most common problems and I can give them some solutions regarding their issues. I was worked on it for showing some solutions for the farmers based on the problems they were facing in their daily life in the farming. So, to collect those details I have interacted with the farmers by asking some questions that I was prepared.

The Questions Prepared For The Survey:

1. Name of the Farmer.
2. Father's Name?
3. Name of the village?
4. How many Acres of land they are having?
5. Is all this land belongs to you or taken from any other?
6. How much income you were getting in a year?
7. Is your income sufficient for looking your family?
8. Are you getting any loses?
9. Are you receiving reasonable prices for your crops?
10. Is there any pest attacks to your crop?
11. Are you facing the water problems?
12. Are you having any other problems to be solved?
13. What are the changes you required?
14. Is there any issue that we can take to the view of the government?

After the completion of two weeks of the Survey I have identified that farmers in the village were facing many problems in their work and also suffering economically. So, regarding their problems and the data that I have collected, by using those details I have identified some common problems that most of the farmers were facing in their life. I have list out some common problems for moving into the next step. So that I can show them some solutions for their problems. I have mentioned some problems that I have noticed commonly in the entire village among the farmers.

5.1 The Problems Identified In The Village:

1. NOT GETTING MINIMUM PRICE FOR THE PRODUCTION:

Farmers are not receiving the minimum prices for their crops. So, they were facing lot of financial problems in their daily life. This became major problem among all the other issues. With this problem they were facing lot of financial problems. They were unable to take care of their family problems. They were also not getting sufficient food for their family members. So, this issue need to be cleared as this is the top most problem faced by all farmers.

2. NATURAL DISASTERS:

Pest Attacks:

Farmers were facing these pest attacks on their crops. Agricultural and horticultural crops are attacked by a wide variety of pests, the most important being insects, mites, nematodes and gastropod molluscs. The damage they do results both from the direct injury they cause to the plants and from the indirect consequences of the fungal, bacterial or viral infections they transmit.

Floods:

The natural disasters like floods are causing lot of damages to the crops. And they were not getting rid from those floods. The consequences of floods will bring losses to the rice production and cause instability. The damage of paddy production due to floods needs to be handled seriously as the negative impact could lead to insufficient food supplies in the country.

3. IRRIGATION/WATER PROBLEMS:

Paddy crop is strongly influenced by water supply. Water should be kept standing in the field throughout the growth period. In water scarcity areas, saturated soil in a chemical reduced stage is desirable. For the irrigation of paddy and other crops they need lot of water resources. For this they were using a single water resource for 3-4 fields. This was taking a lot of time for them. So, they need more water resources like water motors and other water resources to get rid of those issues.

4. MILLERS ARE GETTING BENEFITED BUT FARMERS ARE STILL STRUGGLING:

After getting their crops farmers need to sell their crops in the local rice mills. That was the only way for them to get the money from their crops. But they were not receiving the minimum prices for their crops. And even they were not receiving their money after selling it. It was taking a lot of time for them to receive their money from those people. This became a big problem for all the farmers in the village. So, this issue need to be solved.

Short-term and long-term action plan for possible solutions for the problems identified and that could be recommended to the concerned authorities for implementation.

After collecting all their problems and I sort out some major problems from them. And I tried to give them some solutions for their problems. According to their problems I have given them some short-term and long-term action plans for solving their problems. I thought these may helpful to the famers in the village to resolve their problems.

5.2 Short-Term Solutions:

1. FOR IRRIGATION PROBLEM:

Saving the water by constructing some water tanks in the fields and use that water for future crops. This will need less place and low budget. So, this will help the farmers a lot for using that water in their emergency situations.

2. INTRODUCING PLANTIX APP:

Some farmers are unaware of climatic conditions and the pesticides to be use for their crops. This app helps them a lot. This app will intimate the farmers that how the weather would be by giving notifications. And it will also tell them that use of different pesticides according to the climatic conditions. This will be helpful them for not getting loss.

3. DRIP IRRIGATION:

It reduces and optimizes water use. A well-designed drip irrigation system loses very little water because it minimizes runoff, evaporation or deep percolation in silty soil. It limits the main causes of water loss during irrigation. This will be very useful for the farmers.

4. USING SEA WEED EXTRACTS:

Using seaweed extract on or before 20 days of planting the seeds of paddy will increase the production of paddy. Using 4-5 kg's of seaweed extract in 1 acre can increase the production quantity of paddy.

5.3 Long-Term Solutions:

After given the small-term solutions for the farmers, now I need to provide the farmers a long-term solution. So, for that I have written a letter for the concerned higher authorities by mentioning the problems of farmers of that village. I have taken these problems to the notice of the Agricultural Officer, The Village Sarpanch and other higher officials in the Grama Sachivalayam.

I have written all the problems and the solutions of the farmers and gave them to all the higher officials and requested them to solve those issues as soon as possible. So that the farmer's problems will be solved and they can live their life happily.

As a part of it, I requested the village Sarpanch to forward the issue to the concerned authorities to provide the affordable prices to the farmers for their paddy bags.

5.4 CONDUCTING AWARENESS CAMPAIGNS IN THE VILLAGE:

As the next step in the Community service project, I was planned to conduct 2 awareness campaigns in the village to the farmers. For this I need to conduct campaign to cover all the farmers in the village. I searched for the places where I can gather most people. So that my message will pass to all the farmers in the village. For conducting these campaigns, I had done some further activities like taking permission from the govt. officials to conduct the awareness campaigns.

5.4.1 COMMUNITY AWARENESS PROGRAM-1:

The first awareness campaign was conducted with the farmers near the sachivalayam of the village. On this campaign farmers were participated actively and listened to the speech given by me. The flex is fixed in the background, so that will identify this as an awareness campaign and more people will gathered. In the campaign I have discussed all the problems faced by them in the fields like not getting minimum prices, irrigation problems, natural disasters, water problems and some other problems. I have mentioned all the above problems with the people.

In the next step I have discussed the solutions for their problems that I mentioned in the above. The solution that I need to provide with the farmers will be very helpful for the farmers.

The farmers will get more benefits and better solutions with the solutions that I have provided to them. The farmers were asked some questions too. I tried my level best to answer them. They were interacted with me very well and possessively with me. So, all things had went well. I had discussed all the problems and their solutions with the farmers. Finally, my first campaign had went well. And I had received from the farmers that the solutions which I had provided to them will be used in their next crops.

5.4.2 COMMUNITY AWARENESS PROGRAMME-2:

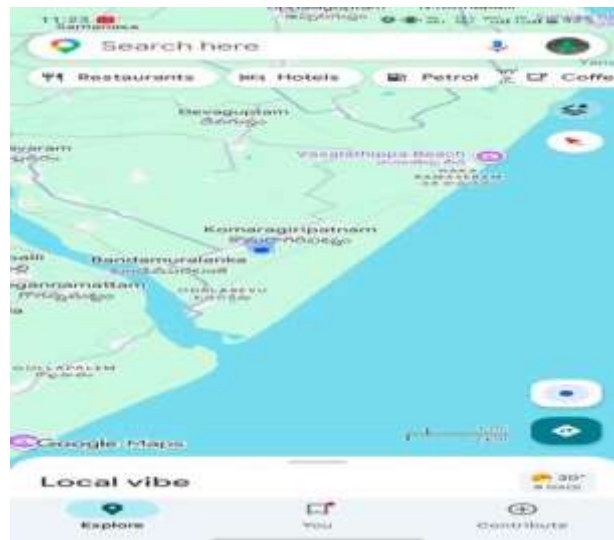

The second awareness campaign was conducted with the farmers in the green fields of the village. In this campaign farmers were participated very actively. In the second campaign I had discussed all the problems faced by them in the fields like not getting minimum prices, irrigation problems, natural disasters, water problems and some other problems. And also provided the solutions with the farmers. I had conveyed all the solutions and their benefits with the farmers. I hope it will be useful for them.

5.5 Report of the mini-project work done in the related subject w.r.t the habitation/village.

This is about the mini project work that was done in the village. This project is about the agriculture and its impact on farmers for this we choose a village and conduct the survey and awareness campaign with in the village.

For this we choose the Komaragiripatnam village which is situated in Allavaram Mandal in Konaseema District of Andhra Pradesh. It is Located 70KM west from District headquarters, Kakinada. Approximately 1250+ families live in this village. The village is about 2500acres. Paddy and Vegetables are the main cultivating crops in that village.

The Geographical location of Komaragiripatnam village:

Agriculture:

The “agriculture” word is derived from two Latin words, agricultūra, from ager, "field", and cultūra, "cultivation" or "growing". Agriculture is the science or practice of farming, including cultivation of the soil for the growing of crops and the rearing of animals to provide food, wool, and other products.

Importance of Agriculture:

Agriculture plays a chiefly role in economy as well as it is considered to be the backbone of economic system for developing countries. For decades, agriculture has been related with the production of vital food crops. The Present era of farming contains dairy, fruit, forestry, poultry beekeeping and arbitrary etc. However, it could be referred to as promotion, processing,

marketing, and distribution of crops and **livestock** products. It is also providing the employment chances to huge percentage of the inhabitants. The industrial sector of Pakistan is almost depending on agriculture for raw material. The input of agriculture towards GDP is about 25% which is highest contribution any other sectors.

Animals and Plants are the two major sources of food. People have always collected plants and hunted animals to fulfill the needs of Food and Nutrition. Later, people who started agriculture became dependent on it for their nutritional needs.

In olden days, agricultural technique was eco-friendly but didn't yield high crop comparing now. Anyway, that is enough for those people as there was less population. Those farmers were seen as GOD but now it is in contrast. Only governments are respecting farmers and that too only for those belong to their state or country. Even, farmer's families do not give respect if they have low income or if their crop failed. Some parents resisting their children in choosing agriculture as their career field due to their disrespectful towards farmers but they do not understand that without farmer, it is impossible to survive in this world. It is horrible to see that even farmer do not prefer to see his son as farmer due to influence of this society. Now days, many farmers left their farming work and went to some nearby industries. Also, some committed suicide and the reason is that their crops are failed due to unavailable of water sources. There is another case also that some farmers who have few acres do some research on their own and finding new techniques so that they can achieve maximum crop yield. These farmers arrange private water sources and also earn more. These farmers are selfless as they also publish about their work with no charge. Anyway, some are eco-friendly and some not. If we focus deeply in it, day by day farmers are discouraging by this helpless society and we can understand that farmer's conditions are based on their experience and also on their determination. However, it shame to see that states of our country act as envy countries for lending their water sources for agriculture. In India, we are following many modern techniques to increase crop's yields. Either it is eco-friendly or not, we continue giving importance to improve the crop yield as to withstand the increasing population. Therefore, we lost the uniqueness of olden day's agriculture as these modern techniques reduce the strength of the crops and also reduce land's fertility.

Anyway, these farming techniques are necessary as day-by-day farming lands are converting into apartments and factories. Actually, everything is happening in contrast as for

increasing population, we must increase the agricultural land but instead we are decreasing it and that result in using modern techniques without considering whether it is eco-friendly or not. And, these farming techniques give more profit only if we done more investment. Some of the farming techniques found by farmers on their own researches is spreading in newspaper and in internet for encouraging other farmers to continue it and earn more but we forget that many villages have no internet facilities and many farmers don't know to read. So, the awareness is lacking. Our government should appoint some persons to spread awareness about these profitable techniques to uneducated farmers. Some are non-eco-friendly but still we continue. We must understand that anything which is non-eco-friendly may be profitable for time being but not ever lasting. It may result in danger in future. Hence, it is better to follow profitable eco-friendly farming techniques than anything else for better future.

Impacts on farmers :

1. **Pollution:** Agriculture is the leading source of pollution in many countries. Pesticides, fertilizers and other toxic farm chemicals can poison fresh water, marine ecosystems, air and soil. They also can remain in the environment for generations. Many pesticides are suspected of disrupting the hormonal systems of people and wildlife.
2. **Water Consumption:** The agricultural sector consumes about 69 percent of the planet's fresh water. Without creative conservation measures in place, agricultural production consumes excessive water and degrades water quality. This adversely impacts freshwater systems throughout the world.
3. **Climate Change:** Many farming practices—such as burning fields and using gasoline-powered machinery—are significant contributors to the buildup of greenhouse gases in the atmosphere. The Food and Agriculture Organization of the United Nations (FAO) contends that the livestock sector alone is responsible for 18% of all greenhouse gas production. Additionally, clearing land for agricultural production is a major contributor to climate change, as the carbon stored in intact forests is released when they are cut or burned.
4. **Poverty:** Producers facing declining harvests from cleared lands expand into surrounding wild lands that are rich in biodiversity, resulting in a cycle of more people living below the poverty line and biodiversity loss.

How has climate change affected human life?

Contamination of groundwater

The groundwater is one of the important sources of water for irrigation. From agricultural fields, nitrogenous fertilizers leach into the soil and finally contaminate groundwater. When the nitrate level of groundwater exceeds 25 mg/l, they can cause a serious health hazard known as “Blue Baby Syndrome”, which affects mostly infants even leading to their death.

Water-logging and salinity

The salinity of the soil is one of the reasons of low productivity just because of the improper management of farm drainage. In this situation, the roots of plants do not get enough air to respiration then it leads to low crop yield as well as low mechanical strength.

Eutrophication

It refers to the addition of artificial or non-artificial substances such as nitrates and phosphate, through fertilizers or sewage, to a freshwater system. It leads to an increase in the primary productivity of the water body or the 'bloom' of phytoplankton.

Excessive use of fertilizers that consists of nitrogen and phosphorus leads to over nourishment of the lakes/water bodies and gives rise to the phenomenon of eutrophication (EU = more, trophication= nutrition).

Excessive use of Pesticide

There are many pesticides that are used for destroying pests and boosting crop production. Earlier arsenic, sulfur, lead, and mercury was used to kill pests. For Example- Dichloro Diphenyl Trichloroethane (DDT) content pesticides were used, but unfortunately, it also targeted the beneficial pests. Most importantly, many pesticides are non-biodegradable, which also linked to the food chains which are harmful to the human being.

The relative significance of farming has dropped steadily since the beginning of industrialization, and in 2006 – for the first time in history – the services sector overtook agriculture as the economic sector employing the most people worldwide. But we forget that if we need food to survive then we need agriculture.

Climate change trends

Changing precipitation patterns. Rainfall patterns have already begun shifting across the country, and such changes are expected to intensify over the coming years. This is likely to mean more intense periods of heavy rain and longer dry periods, even within the same regions.

5.6 Survey conduction:

We formed a group of 5 members and conduct a survey in the Tatiparthi village. For this we prepare a questionnaire to gather the required information about the farmers and the problems faced by the farmers

The below form is used to collect the information:

సమాచార పత్రము

తేదీ:-.....

అభ్యర్థి పేరు:-

తండ్రి పేరు:-

ఊరు పేరు:-

ఎన్ని ఎకరాలు:-

ఆదాయం:-

సమస్యలు:- ☐ గిట్టుబాటు ధర రాకపోవడం
☐ పంటకు పురుగుపట్టడం
☐ నీటి సమస్యలు ఎదురుకోవడం
☐ ఇతర సమస్యలు

.....

.....

.....

సంతకం

Steps followed to collect the information:

1. **Identification of fields :** To collect the information which is required for us. We have interacted with staff of local Sachivalayam to know where the fields are located.
2. **Interaction with the farmers:** Our group had interacted with the farmers of the village and gathered the information about their fields and agriculture.
3. **Filling the survey form:** By interacting with the farmers, we collected the information in the survey form. In this form we collected the information such as name of the farmer, village name, how many acres the farmer is cultivating, income, and the issues faced by the farmer in their respective fields.
4. **Identifications of the problems:** By the information gathered in the survey form we identified many issues that are faced by the farmers.

Sample data that we collect from the farmers:

S.NO	NAME OF THE FARMER	LAND	INCOME FOR CROP	PROBLEMS
1	Ram Babu	2 acres	60K approx	Pest Attacks
2	V.Durga	2.1 acres	60-70K	Soil degradation
3	S..V Satyanarayan	1.8 acres	41K	Cheap seeds distribution
4	K,V.S mutri	2.2 acres	80k	Fertility loss
5	Naga babu	4acres	>75K	Weather status and soil problem
6	P.Jhon prasad	5 acres	100K+	Irrigation Problems
7	D. Niranjan [Farmer+ Non Farming activities]	2.2 acres	25K [Farming]	Not getting minimum price.

Problems identified:

1. Not getting the minimum price for the product.
2. Pest attacks.
3. Salt Water problems.
4. Fertility loss.
5. Electricity Problem.
6. Delay of money for the product they sold to the govt.

Problems Overview:

1. Not getting minimum price for the product:

- The problem is mostly we seen in the paddy cultivators.
- On an average the farmer has to invest the capital of 30,000 to 35,000 per acre to cultivate paddy.
- The average getting price after selling one bag of rice to the millers is 1000 to 1250 based on the grades of the rice
- One acre of paddy field produces 28-32 bags of paddy.
- If we remove the wages of the daily wage workers. ▪ There will be no sufficient money for the paddy cultivators

Natural disasters:

- Pest attacks - Agricultural and horticultural crops are attacked by a wide variety of pests, the most important being insects, mites, nematodes and gastropod mollusks. The damage they do results both from the direct injury they cause to the plants and from the indirect consequences of the fungal, bacterial or viral infections they transmit.
- Floods - The consequences of floods will bring losses to the rice production and cause instability. The damage of paddy production due to floods needs to be handled seriously as the negative impact could lead to insufficient food supplies in the country.

2.No hospital facility:

- In the village there is no nearby hospital.If there is any illness, they have to travel few kilometres to the hospital.
- Sometimes, snake bites are occurred to the farmers they should move to few kilometres to the treatment.

Conduction of Campaign:

After the completion of the survey, we conduct the awareness campaign in the village based on the problems they faced. We will try to give the possible solutions of the problems they faced.

With the help of the project mentor and the sachivalayam staff we find the possible solutions of the problems they faced while they are farming.

We create a poster based on the project and done the awareness campaign.

The poster we make for the campaign is shown below:

While we conducting the campaign, we discussed the solutions that we find out for their problems.

Solutions we discussed in campaign:

1. **Introducing the plantix app:** The app claims to diagnose pest damages, plant diseases and nutrient deficiencies affecting crops and offers corresponding treatment measures.

2. **Drip Irrigation:** It reduces and optimizes water use. A well-designed drip irrigation system **loses very little water** because it minimizes runoff, evaporation or deep percolation in silty soil. It limits the main causes of water loss during irrigation

3. **For irrigation problem:** Saving the water by constructing some water tanks in the fields and use that water for future crops.

4. **Using Sea Weed Extract:** Using seaweed extract on or before 20 days of planting the seeds of paddy will increase the production of paddy. Using 4-5 kgs of seaweed extract in 1 acre can increase the production quantity of paddy.

CHAPTER 6: RECOMMENDATIONS AND CONCLUSIONS OF THE MINIPROJECT

After completion of campaign, I made them aware of the farming in the village. Village People know some information about farming, and they knew how to grow crops efficiently and how to get more profit from crop and how to grow crop healthy.

In that village, people have some issues about farming and they have to decide how to grow the crop without pesticides and we have also aware of organic farming.

People are interested to participate in campaign and get knowledge about the farming and we had given some suggestions to grow crop efficiently.

Most of the people have don't know about which pesticides is used for various pest attacks and we had made them aware of Plantix app and know the solution of which type of crop it is and some little problems also aware on it.

Most of the farmers had water problem. So, I had made them aware on that problem how to store water and how to use it in seasonal times, and they get more information about drip irrigation.

In the drip irrigation, they have to knew how to save water for future crops and how much quantity of water is used for crops in this campaign. Most of people are don't know how to store water and in this campaign, I had made then aware of storing of water resources for future crops.

Student Self-Evaluation for the Community Service Project

Student Name:

Registration No:

Period of CSP: From: To:

Date of Evaluation:

Name of the Person in-charge:

Address with mobile number:

Please rate your performance in the following areas:

Rating Scale: 1 is lowest and 5 is highest rank

1) Oral communication	1	2	3	4
2) Written communication	1	2	3	4
3) Proactiveness	1	2	3	4
4) Interaction ability with community	1	2	3	4
5) Positive Attitude	1	2	3	4
